This is to certify that the above named patient was examined : 10/15/2021  
(M)/(D)/(Y)

### 1. Diagnosis ( Conclusion ) :

Rhabdomyosarcoma  
Special screening examination for Coronavirus disease 2019 (COVID-19)

ICD-10th :  
C49.9  
Z11.5

### 2. Treatment :

This 5 year 10 month old male patient was diagnosed with alveolar rhabdomyosarcoma of the right leg T2aN0M0, Stage IIIa in October 2020, in Russia. The patient went through 1st line chemotherapy of 4 courses during 2020/10/13-2020/12/25. Then, the patient underwent surgery to remove the tumor in the right leg on the 14th January 2021. After tumor removal, the patient went through Radiation therapy for primary tumor (2021/2/2-2021/5/3). Subsequently, the patient went through another 5 courses of chemotherapy during 2021/1/20-2021/4/16. However, the patient showed tumor relapse at the right leg in August 2021. The patient's tumor showed progression and lymph node metastasis. The patient went through another chemotherapy in 2021/9/16-9/19. Then, the patient was transferred to our hospital in October 2021 for further evaluation and management. At our hospital, the patient is scheduled for PET-CT, central catheter insertion and chemotherapy of Gemcitabine and Docetaxel. The patient went through Radiation therapy for relapsed lesion at right calf area (2021/11/22-2021/12/24).

### 3. Follow-up Plan :

The estimated duration of treatment is around more than 6 months, but it depends on the proceeding imaging study results.
